splitting fields?	Yes, please!	

My favorite problem

Let G be a finite group and p a prime.

My favorite problem

Let G be a finite group and p a prime.
Let $B \subseteq \mathrm{Irr}(G)$ be a p-block and let

$$p^d := \frac{|G|_p}{\min\{\chi(1)_p : \chi \in B\}}.$$

My favorite problem

Let G be a finite group and p a prime.
Let $B \subseteq \mathrm{Irr}(G)$ be a p-block and let

$$p^d := \frac{|G|_p}{\min\{\chi(1)_p : \chi \in B\}}.$$

Richard Brauer, 1946:

THEOREM 8: *A block B of defect d contains at most $p^{d(d+1)/2}$ ordinary characters.*

It is probable that the bound $p^{d(d+1)/2}$ here can be replaced by p^d, but I have been able to prove this stronger result only for $d = 0, 1, 2$.
